

Question 1: What is your understanding of Blockchain?

A blockchain is a database shared across a network of computers. It is very difficult to change once a record has been attached to the chain. The network continually checks to ensure that all copies of the database are the same.

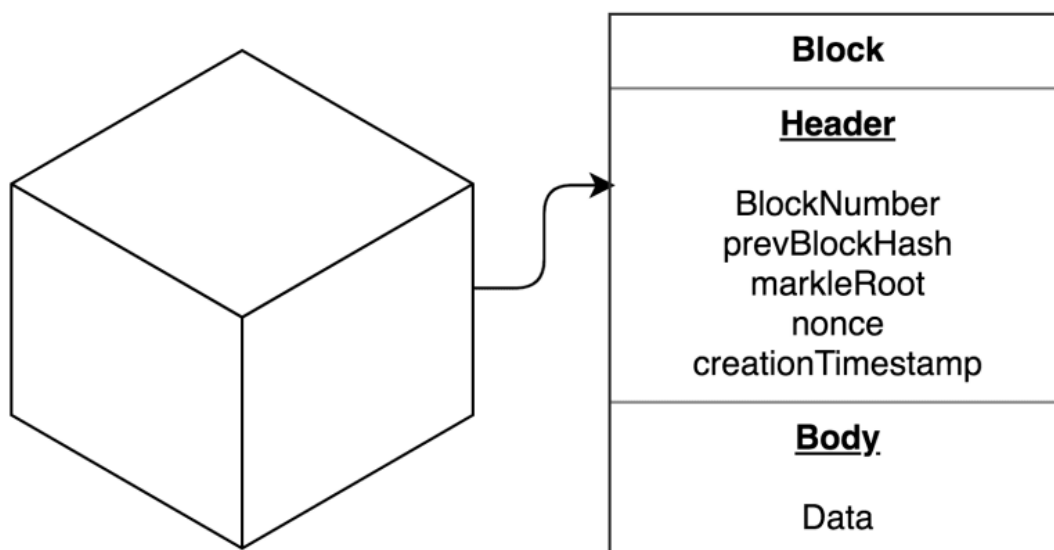

Question 2: What is the core problem Blockchain trying to solve?

Crisis of investment in international banking. It was designed to solve the double-spending problem

Question 3: What are the few features which Blockchain will give you?

1. Cannot be corrupted
2. Decentralized Technology
3. Enhanced Security
4. Distributed Ledger
5. Consensus
6. Faster Settlement

Question 4: What all things does a Block contain?

Question 5: How is the verifiability of Blockchain has been attained?

Blockchain offers a new public infrastructure for verifying credentials in a manner far more durable, secure, and convenient than relying upon a single authority. Public Verifiability allows anyone to verify the correctness of the state of the system
